

Unlock the Power of AI with HP and CodeMate

Quick Start Guide

Scan the QR code to download the ToolBox.

To install CodeMate AI, head to [download page](#) and download the installer according to your device configuration and run it. You will need administrator permissions to complete the installation. Follow the installation wizard and be sure to read the Privacy Policy and Terms of Use.

To ensure it is installed correctly, launch the app and verify that the Toolbox application open on your device.

Preferably, install and keep an IDE, such as Visual Studio Code or a JetBrains IDE, ready on your device.

Step 1: Launch and Set Up CodeMate on your HP Devices. To 'Continue' first authenticate with your credentials and once verified comeback to the ToolBox.

Step 2: Choose which Product you want to proceed with-

CO (IDE Extension):

An AI coding assistant that helps you understand, improve, debug, and review your code.

CORA (IDE Extension):

An AI coding agent that helps you build, fix, and improve software while following your instructions and security guidelines.

Dashboard (Web Platform):

Manage users, projects, licenses, integrations, and AI usage in one place. Built for visibility, control, and governance.

Build (Web Application):

Turn prompts, Figma, docs, or screenshots into full-stack apps faster.
Ideal for MVPs, internal tools, and enterprise apps.

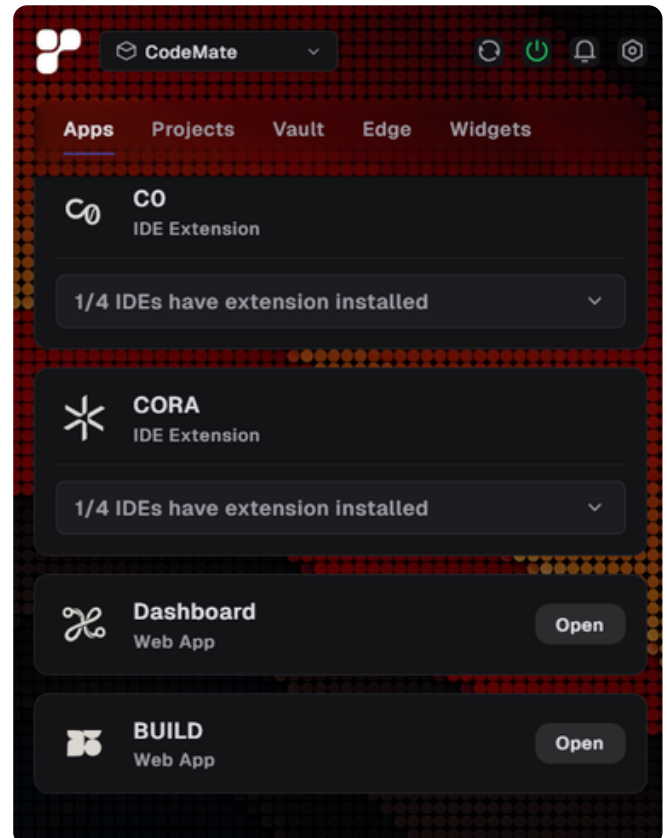

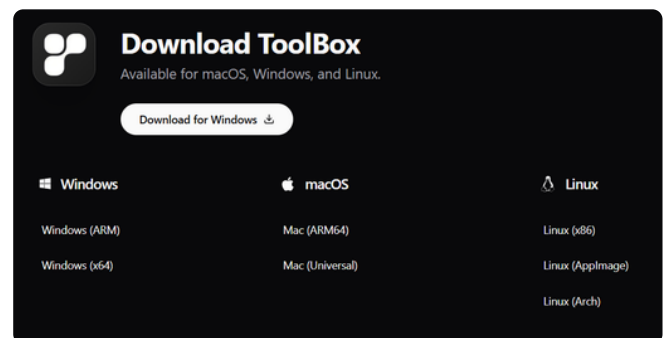

Step 3: Launch and Start Building

Open your chosen product from the ToolBox, connect your files or repo, and describe what you want to build.

Install → Choose Product → Launch & Use

Now You're Ready to Go!

Just open your HP AI PC, focus on your Development CodeMate AI is now ready enhance everyday tasks.
